Inside reserve
Re-detected in ≥1 later year
Re-detected in ≥3 later years
b After controlling for subsequent effort and year
Green band: pre-declared equivalence bounds [0.67, 1.5]; the intervals are slightly wider, so we report no detectable difference rather than equivalence
Re-detected in ≥1 later year
Re-detected in ≥3 later years

2.00
Inside-vs-outside odds ratio (95% CI)
c Re-detection is governed by subsequent survey effort
Re-detection rises steeply with checklist volume; inside-outside differences are indistinguishable within every effort band
Proportion re-detected

Cumulative provincial checklists after the first record (log)
d Right-censoring: later first records have shorter follow-up
The main analysis is therefore restricted to events up to 2020
Proportion re-detected in ≥3 later years
