

a

Intrinsic detectability differs among species

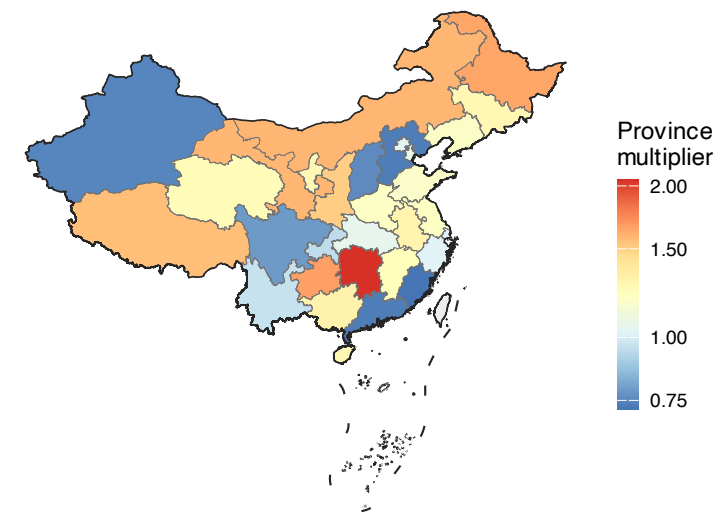

Species random intercepts; diamond is the group median

b

Regional baselines after controlling for effort and climate

Province random intercepts. Base map GS(2019)1822

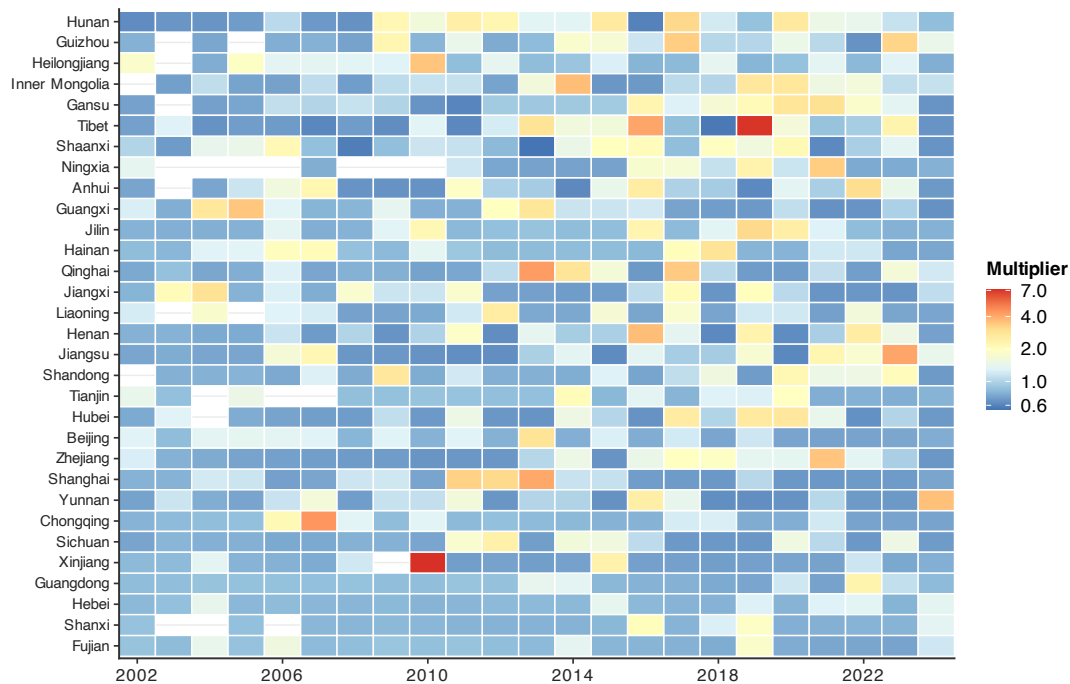

Grey: outside the analysis scope (Taiwan, Hong Kong, Macao have no effort coverage)

c

Where and when the observation process actually moved

Province-by-year random intercepts, the largest variance component (SD 0.804, spanning a 7-fold range)

d

The return on survey effort is falling

Effort x time interaction $P = 7.7e-4$; easily detectable gaps are being used up
